Summary

I don’t just write code – I design systems. For the last five years I’ve been the architect behind critical digital infrastructure in Latvia. I don’t see myself as someone who closes tickets; I take ownership of the entire mission – from the first sketch to the final layer of server security.

I specialize in high-stakes portals where security and scale aren't optional. Whether I'm building a tool for a citizen to report a road hazard or a secure gateway for national labs, my goal is to make complex data feel human and accessible. Outside of my main builds, I’m usually found mentoring the next generation or pushing the boundaries of what's possible with VR, AI and technical art to find new ways to visualize the world.

Experience

SIA "Cloud Enterprise Systems" Latvia, Jelgava
Full stack developer 2023 - 2026
Cloud Enterprise Systems is a software development firm specializing in enterprise-grade information systems, mobile applications, and complex web architecture. The agency is a strategic partner for Latvian national institutions, delivering high-availability portals that manage critical public and scientific data.

- **Role & Impact:**
  - **National Infrastructure Lead:** Collaborated within an agile team of developers and designers to engineer high-traffic WordPress portals for national bodies.
  - **Accessibility & Compliance Specialist:** Authored comprehensive technical assessments and implemented accessibility updates, ensuring 100% compliance with national standards for public-sector platforms.

Youth center “Pakāpiens” Latvia, Jelgava
2024 - 2026
The youth center is a community-centric hub dedicated to the personal and professional development of young people through innovative educational programs and informal training.

- **Role & Impact:**
  - **Systems Architect:** Acted as the primary technical lead, responsible for the center's digital infrastructure.
  - **Data Automation Engineer:** Designed and deployed a custom "Big Data" reporting engine and registration system, automating high-volume data collection.
  - **Immersive Media Developer:** Engineered a 360 VR platform compatible with VR glasses, facilitating virtual tours
  - **Technical Mentor:** Combined hardware and software expertise with interpersonal leadership to work directly with youths, fostering digital literacy and technical problem-solving skills.

Education

"Jelgavas tehnikums" Professional secondary education
Programming technician 2019 - 2023

Projects

BIOR (Institute of Food Safety, Animal Health and Environment)
Institutional Gateway and Secure Client Portal Architected a sophisticated institutional gateway featuring a secure, multi-layered Client Portal designed for laboratory service coordination and scientific resource management. The platform streamlines the submission of laboratory samples and the dissemination of results across food safety, animal health, and environmental sectors.
https://bior.lv

Latvijas Valsts Ceļi (Latvian State Roads)
Primary Digital Hub for National Road Infrastructure Developed the national mobility nexus for infrastructure management, integrating complex interactive mapping services with real-time sensor data and administrative boundaries.
https://lvceli.lv

Latvijas Skolas Soma (Latvian School Bag)
High-Concurrency Cultural Education Platform Engineered the national platform bringing cultural heritage to every student in Latvia. The system is architected for massive scalability, supporting a user base of 230,000 students and their educators every academic semester.
https://latvijasskolassoma.lv

Dienvidkurzemes Kultūras Mantojums (National Heritage Board of Latvia)
Centralized Digital Heritage Repository Engineered a regional digital asset management system for antiquity storehouses and memorial rooms, effectively centralizing the archival and presentation of historical artifacts.
https://kulturmantojums.lv

Latgales Centrālā Bibliotēka (Latgale Central Library)
Multi-faceted Public Information Portal Built a comprehensive digital hub managing regional library branches and specialized community centers, emphasizing digital literacy and accessibility.
https://lcb.lv

APPC (East European Policy Research Centre)
Content-First Geopolitical Research Platform Developed a strategic communication platform designed for the dissemination of foreign policy expertise, focusing on national security, defense, and hybrid threats.
https://appc.lv

Digital lessons (State Police project)
Gamified Public Safety Training Developed a series of interactive, age-appropriate educational games focused on road traffic safety and public order, utilized within national school lecture frameworks.
14-18 years - https://csd3.cryptoquantfund.eu/
9-13 years - https://csd2.cryptoquantfund.eu/
6-8 years - https://csd1.cryptoquantfund.eu/

Youth Registration & Analytics Engine - Youth Center "Pakāpiens"
Automating high-volume data collection and youth engagement tracking.

This tool replaced manual tracking, drastically reducing administrative overhead and ensuring data integrity for institutional reporting.

Immersive 360 VR Explorer - Spatial Learning Platform
Bridging the gap between hardware and education through immersive media.

I engineered a 360 VR platform specifically designed for use with VR glasses to facilitate interactive virtual tours.

Beyond development, I acted as a Technical Mentor, leading workshops to help youth solve technical problems and build digital literacy through this immersive medium.

Volunteer

SIA "Cloud Enterprise Systems" 2021 - 2023
Began my professional trajectory through a strategic volunteer term at **SIA Cloud Enterprise Systems (CES)**, in software development solutions. My focus during this period was the end-to-end creation of digital lesson games for schools, a role that required balancing complex programming with intuitive UI/UX design for younger audiences.
